

AutoHotkey v1.5.0 Changelog

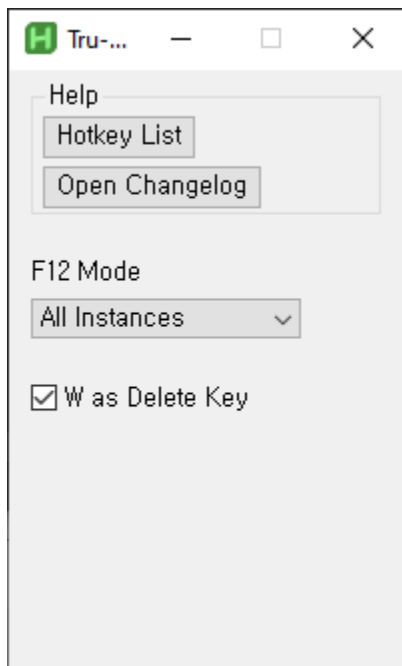

New Features	2
New Dashboard.....	2
New Hotstrings.....	2
Changes	3
Bug Fixes	4

New Features

New Dashboard

The dashboard is opened from the system tray menu.

There are two buttons in the help section. The hotkey list button will open the list of hotkeys. And the open changelog button will open this document.

The dashboard contains two settings.

F12 Mode:

- If this is set to “disabled” pressing f12 will not close esprit
- If this is set to “Active Instance”, the script will close the esprit window you are currently working on.
- If this is set to “All Instances”, every instance of esprit will be closed.

The “W as Delete Key”, if enabled will make the script use w as a delete key. If disabled, W will not do anything.

New Hotstrings

Typing 2-1 on a TL/AOT case will type out the 2-1 Front Turning Short operation. If it is typed on a DS or ASC case, it will type out the regular 2-1 Front Turning operation.

Typing 5-1 on a TL/AOT case will type out the 5-1 Front Turning operation.

Changes

- The G5 key now has the X,90 functionality removed. G5 will now open a blank instance of Esprit.

Bug Fixes

- Fixed a bug where the script would look for the macro bar when esprit was not open.
